

Lead Your Organization to a Secure Cloud

Your Journey to Cloud Security Transformation

More enterprises and agencies are leveraging the cloud as a new hub for competitive computing strategies. However, 84% of organizations say traditional security solutions don't work in cloud environments.¹ We offer various services to help you gain control of our cloud environment with a "Security First" strategy.

Our services cover all aspects of cloud security including security operations, compliance, and architecture. We begin by learning about your overall cloud vision, assessing and reviewing your key drivers, controls, and data security strategies.

Phase 1 - Identify

- Perform a health check of your environment
- Review cloud security best practices
- Make cloud security technology recommendations

Phase 2 - Resolve

- Review your cloud security architecture
- Implement enhancements
- Provide engineering resources and recommendations

Phase 3 - Monitor

- Perform quarterly health checks of your cloud environment
- Also available is a 24x7 managed service option

Put an **ELITE** Team of Cybersecurity Practitioners on Your Side

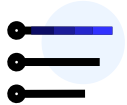

GuidePoint's Cloud Security Practice is comprised of highly-certified AWS, Azure and Google Cloud experts who have developed and led some of the largest cloud security initiatives at Fortune 500 companies.

Hundreds of Industry and Product Certifications

¹Cloud Security Report, Crowd Research Partners, 2018

GuidePoint's Cloud Security services include:

Cloud Security Assessments

Cloud Readiness

As you prepare to migrate to the cloud, we provide a scored report that evaluates the maturity level of your organization's security posture and your state of cloud readiness.

Cloud Maturity

If your organization already has a cloud footprint, our assessment provides a quantified snapshot of your current state to give you a clear roadmap for improvement and optimization.

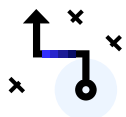

Health Check

Gain a third-party review of your cloud infrastructure's current state with a report that rates your cloud security controls across cloud services, workloads, identity management and data protection, and provides recommendations for improvement.

Cloud Security Engineering

For security teams that need more resources or expanded expertise, our Cloud Security Engineering service provides you with the right resource to help you execute your cloud security program.

Cloud Security Strategy

We have developed a unique cloud security framework covering more than 150 risk and security controls - based on the Cloud Security Alliance, CIS Benchmarks and our own operational experiences - to help you create and ensure a secure cloud environment.

Container Security

Container Technologies allow you to deploy a robust and resilient computing cluster for your platforms and applications. Our team of container security experts will help you understand and manage container security in the cloud.

Digital Transformation

As organizations continue to migrate legacy applications and infrastructure into the cloud, they are faced with new challenges and processes like never before. Our team can help you navigate this new frontier providing you guidance and implementation support for your security needs during your transition to modern technology and practices.

With all the moving parts that go into a full security program, defining and executing a comprehensive Cloud Security strategy can be a difficult task. **GPVUE** leverages our expertise across a wide range of cybersecurity disciplines to provide an **integrated** program that is designed specifically to meet the unique security needs of your organization. Find out how GPVUE can evaluate and integrate Cloud Security into your overall security framework, and build your best security program today.
