

APPLICATION SECURITY SERVICES

Secure Application Delivery at the Speed of Business

Rapid development cycles, containerization, and interconnected APIs accelerate delivery. They also increase complexity, expanding attack surfaces and leaving blind spots in testing and validation.

Operationalize applications security (AppSec) across modern development environments with GuidePoint Security. We help teams find vulnerabilities in code and development practices and integrate automated testing and scanning solutions within development workflows, providing real-time visibility into vulnerabilities. Our proven approach improves efficiency, accelerates remediation, and makes security an integral part of the development process, no matter how complex the environment.

Secure By Design

Modern development practices move fast. GuidePoint Security helps organizations keep pace by assessing their environment, integrating security seamlessly into development workflows, and automating security controls.

Our application security practice offers certified expertise with years of relevant, real-world experience securing the application layer, from mainframe and IoT applications to mobile apps and web services. We tailor our services to the unique challenges within each specific environment, focusing on actionable recommendations that immediately improve the security posture. Our tailored approach reduces vulnerability remediation time, minimizes costly rework, and provides real-time developer feedback across application portfolios. It also helps reduce the most risk at the lowest cost of remediation for all of the legacy and modern software across the entire application portfolio.

Whether opting for traditional or artificial intelligence (AI)-augmented Application Security (AppSec) services, we help transform AppSec from a roadblock to a strategic advantage. GuidePoint will assess security gaps in the software development lifecycle, provide implementation guidance, and recommend best practices to improve the maturity of your AppSec program.

We ensure applications are secure by design, with tailored security solutions that can accelerate time-to-market while reducing risk.

Put a Highly-Trained, **ELITE** Team on Your Side

Your organization will be backed by our team of cybersecurity engineers, architects and consultants who are experienced practitioners from Fortune 100 companies, the Department of Defense and U.S. intelligence agencies.

Strategic. Tactical. Managed. AppSec that Fits Your Needs.

Application Security Strategy

Application Architecture Review

Identifies and assesses any security weaknesses due to architectural flaws in an application and provides actionable mitigation and remediation advice.

Software Development Lifecycle (SDLC) Gap Analysis and Program Development

Helps define a foundational strategy to identify and manage application risk, balancing business objectives and innovation, while guiding critical conversations around compliance and governance.

Application Threat Modeling

Partnering with our customers' project teams, we develop an accurate mapping of the known data flows and trust boundaries to uncover potential areas of weakness.

Application Security Training

Interactive courses teach secure code development practices, application threat modeling, AI security, and the fundamentals of reconnaissance and attack surface analysis.

Tactical Assessment

Application Security Assessment

Traditional and AI-augmented application security assessments identify, verify, and report vulnerabilities, misconfigurations, and weaknesses that pose increased risk to the organization.

Mobile Application Security Assessment

Real-world scenarios to simulate an adversary's approach to attacking a mobile application and accessing related sensitive data on a user's mobile device.

Source Code Review

Using a combination of AI-driven analysis and deep human insight, we inspect source code and documentation to reveal vulnerable functions, libraries, infrastructure-as-code (IaC) definitions, and configurations.

Application Security as a Service

Customized Service Offerings

AppSec services that scale based on each organization's unique requirements. GuidePoint helps with implementation or integration assistance or extends the offering into full application security program support.

Best Practices Implementation

Experts will manage AppSec programs by implementing best practices, integrating security tools, minimizing developer workloads, and maximizing productivity.

Managed AppSec Programs

Finding qualified application security professionals is no easy task. With our AppSec as a Service offering, we enable organizations to effectively launch, evolve, and mature their application security program.

Why GuidePoint Security

When cyber threats hit, organizations want the best on their side. GuidePoint Security designs, deploys, and delivers tailored cybersecurity solutions that drive real results. We integrate solutions across any environment — faster, smarter, and with less risk to strengthen defenses. Accelerate application development and deployment with confidence while protecting what matters most.

About Us

GuidePoint Security provides proven cybersecurity expertise, solutions, and services to help organizations make better business decisions. GuidePoint's unmatched expertise has enabled a third of Fortune 500 companies and more than half of the U.S. government cabinet-level agencies to improve their security posture. Our partnership makes us your trusted advisor — not just another service provider.
