

IDENTITY AND ACCESS MANAGEMENT (IAM) IMPLEMENTATION SERVICES

Our **IAM experts** will help you select, test, and implement the right tools for your organization's unique needs

Incorrectly implementing new IAM tools and services can lead to loss of access, increased support tickets, and breaches.

Our Identity and Access Management experts have years of experience helping organizations evaluate, select, and implement new tools to bolster their IAM programs. Our comprehensive assessment and implementation services are based on a set of key program attributes that help shape your requirements and create an IAM capability that delivers value to key stakeholders within your enterprise.

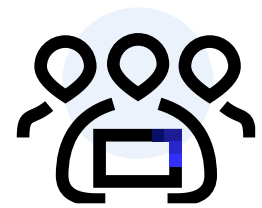

Ensure your IAM program is built to maximize the performance of your tools and streamline your processes.

With the disappearance of the network perimeter and the expansion of cloud infrastructure, managing access to organizational assets has become a key challenge.

Our IAM Assessment and Implementation Services are designed to:

- ✓ Analyze users' access patterns to your critical infrastructure and create effective solutions to enable secure and optimized business operations
- ✓ Engage various stakeholders through the project's lifecycle to obtain ongoing guidance for delivering IAM capabilities aligned to your goals
- ✓ Ensure that your Organizational Change Management (OCM) team is aligned with key stakeholders throughout the project to drive user adoption and training

Our IAM Implementation Services are built to deliver effective and efficient access management for your organization, covering Identity Governance and Administration, Privileged Access Management, and Access Management, the three pillars of IAM.

Put a Highly-Trained, **ELITE** Team on Your Side

More than 70% of our workforce consists of tenured cybersecurity engineers, architects and consultants.

Hundreds of Industry and Product Certifications

Our team of Identity and Access Management experts are ready to help your organization optimize your current tools and infrastructure, and select, evaluate, and implement the right IAM solutions to bring your program to the next level.

Identity Governance and Administration

- ✓ **Implementation services** to design and configure new functionality in an IGA tool
 - Provisioning & lifecycle management
 - Rule-based Segregation of Duties
 - Automated User Access Reviews & Attestation
 - Role-based Access Control
 - Reporting
 - Access Request Approval Workflow implementation
- ✓ **Managed services** to support and maintain functionality already implemented in an IGA tool

Privileged Access Management

- ✓ **Implementation services** to design and configure new functionality in PAM platforms
 - Platform-to-platform migrations, including on-prem to cloud and visa versa
 - PAM Vault implementation services
 - PAM Endpoint Privilege Management implementation services
- ✓ **Managed services** to support and maintain functionality already implemented in a PAM tool

Access Management

- ✓ **Advisory, assessment, and implementation services**
 - Multi-Factor Authentication (MFA)
 - Single Sign On (SSO)
 - Customer Identity Access Management (CIAM)
- ✓ **Managed services** to support and maintain functionality already implemented in an Access Management tool

About Us

GuidePoint Security provides trusted cybersecurity expertise, solutions and services to help organizations make better decisions that minimize risk. GuidePoint's unmatched expertise has enabled a third of Fortune 500 companies and more than half of the U.S. government cabinet level agencies to improve their security posture and reduce risk.
