

## INCIDENT RESPONSE TABLETOP EXERCISES

# Put your Incident Response plans to the test, without the time and cost of an actual breach.

Security isn't a game, but playing it like one can improve your efficacy in the face of a real incident.

Tabletop exercises simulate real-world incident scenarios relevant to your organization and evaluate your response process and capabilities. Through our tabletop exercises, we can help identify potential gaps and areas of improvement in your incident response process.

## Ensure You're Prepared for an Incident

Testing your security systems and defenses is a vital part of any cybersecurity program, but ensuring you're prepared for a real emergency is also of utmost importance.

Our Tabletop Exercises will put your incident response plan through a simulated incident while avoiding any potential repercussions of real-world testing against your infrastructure.

We collaborate with you to develop a simulated incident from our list of predefined scenario topics, or we can create a scenario custom to your organization's current processes, policies, and infrastructure.

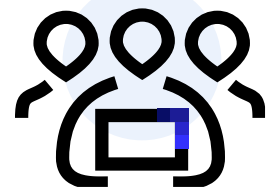

By walking your team through a full incident, our facilitator will observe and evaluate your team's:

- ✓ Knowledge of internal groups, external third parties and their associated roles
- ✓ Individual responsibilities when responding to an incident
- ✓ Overall ability to execute against your defined incident response plan

### Benefits:

In the end, you'll receive a report detailing:

- ✓ How well your team followed the existing IR plan
- ✓ How effective the plan was in addressing the simulated scenario
- ✓ Observed gaps, shortcomings and areas for improvement
- ✓ Recommendations for improving your IR plan

## Put a Highly-Trained, **ELITE** Team on Your Side

Our highly certified, operational cybersecurity experts have lived and breathed your job.

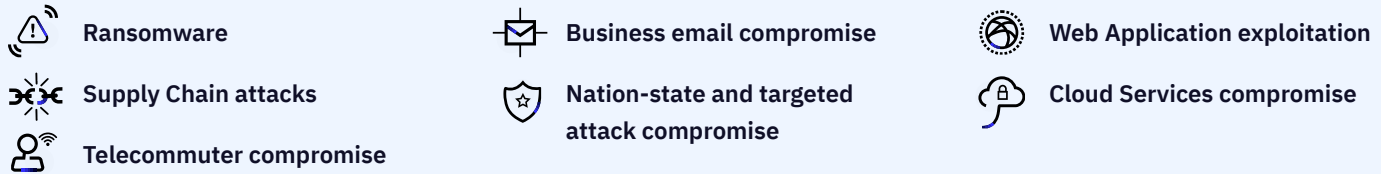

- ✓ More than 70% of our workforce consists of tenured cybersecurity engineers, architects and consultants
- ✓ Many have managed security within the DoD and U.S. intelligence agencies and Fortune 500 companies

## Hundreds of Industry and Product Certifications

# Building a tabletop exercise that works for you

No two organizations are the same, and neither are our tabletop exercises. Our scenarios cover common and high-risk threats and attack patterns, including:

Whether using a predetermined scenario or a fully customized exercise, our tabletop exercises are always tailored to your environment and needs.

Every Tabletop Exercise scenario we develop and deliver goes through six steps to ensure that it is a perfect match for your goals, and the results will deliver actionable takeaways to improve your security.

-  We work hand-in-hand with your team to collect information about your organization, including your current processes, policies, infrastructure, tools, and more.
-  Our Digital Forensics and Incident Response (DFIR) experts customize or develop a simulated incident for your organization.
-  Time is scheduled to execute the simulated incident with participants, as defined in your existing incident response plan.
-  We present your team with the simulation and observe their discussions as to how they would respond to the incident.
-  Over the course of the exercise, the facilitator provides observations, responses, and recommendations to guide your team through the incident response process.
-  We develop a Tabletop Exercise Summary of your team's handling of the incident, your IR plan's effectiveness, and ways to improve.

## Take Your IR Testing to the Next Level

With our **Purple Team** exercise, our experienced Red and Blue teams will collaborate with your team to simulate an attack against your organization. We work together to confirm your visibility and capabilities against real-world incidents. Additionally, we will perform knowledge transfer and enable your team in real time, evaluate your Incident Response methodology and provide feedback.

## About Us

GuidePoint Security provides trusted cybersecurity expertise, solutions and services to help organizations make better decisions that minimize risk. GuidePoint's unmatched expertise has enabled a third of Fortune 500 companies and more than half of the U.S. government cabinet level agencies to improve their security posture and reduce risk.
