

CLOUD GOVERNANCE

Manage risks, enhance data security, and enable cloud systems to run smoothly under our Cloud Governance model

Between defining and maintaining effective security controls, the cloud can be challenging to secure without a proper governance system in place.

We partner with you to build an effective cloud risk management program that bridges the gap between cloud operations and risk management. Through our Cloud Governance approach, you can make informed decisions by swiftly identifying and mitigating risks in the cloud using people, processes and new technologies.

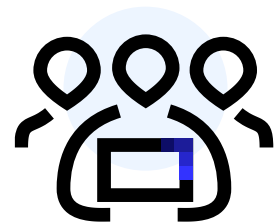

Be an organization of “know” instead of “no”.

The cloud introduces efficiency and enables innovation to facilitate modern and competitive architectures; however, rapid adoption oftentimes leads to decisions made in haste. Poor integrations, configurations that lack proper access control, lack of alignment between cloud teams and your company’s goals, and duplication of effort between different parts of the organization could all arise from poor cloud governance policy.

With our team of experts at the helm of your organization’s Cloud Governance program, you’ll secure a solid foundation by:

- ✓ Implementing a modern approach to identifying risks
- ✓ Ensuring cloud architectures and operations are properly planned and managed

Cloud services can change frequently, and we can help you make informed decisions that will allow your organization to safely move at the speed of the cloud.

Put an **ELITE Team of Cybersecurity Practitioners on Your Side**

More than 70% of our workforce consists of tenured cybersecurity engineers, architects and consultants.

Hundreds of Industry and Product Certifications

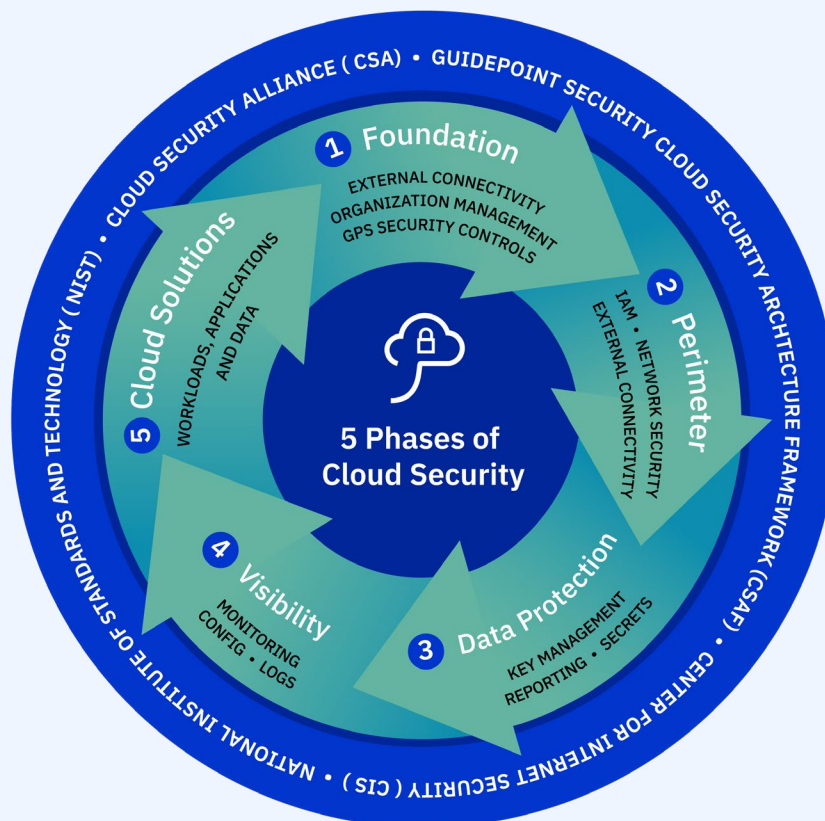

GuidePoint's Cloud Governance team works with your Governance, Risk, and Compliance teams to identify the core elements of your cloud architecture and operations and recalculate their associated risks.

Since the inception of cloud computing, the convenience of the cloud also introduces a risk: administrators, engineers, and builders can extend the data center too easily, and sometimes the new environments appear to be a different organization within the same organization.

Our team of experts will:

- ✓ Communicate with key stakeholders to perform a comprehensive cloud assessment
- ✓ Provide a roadmap for improving your organization's cloud governance
- ✓ Enable your organization to fully realize the business benefits of cloud computing while managing the associated risks
- ✓ Oversee the process, systems, controls, and direction of your cloud services

Our unique 5-Phase Methodology is designed to ensure your organization meets critical requirements for managing operations and security risk. By bringing together your GRC, security, and cloud teams, our approach will ensure your cloud systems meet organizational policies and standards as well as security best practices and compliance needs.

About Us

GuidePoint Security provides trusted cybersecurity expertise, solutions and services to help organizations make better decisions that minimize risk. GuidePoint's unmatched expertise has enabled a third of Fortune 500 companies and more than half of the U.S. government cabinet level agencies to improve their security posture and reduce risk.
