

MICROSOFT 365 HEALTH CHECK

Expert Guidance for a Defensible Microsoft 365 Platform

Misconfigurations across Microsoft 365 identity, access, data protection, and email security create exploitable vulnerabilities that threaten business continuity and regulatory compliance.

GuidePoint Security's Microsoft 365 health check evaluates identity, security, and collaboration posture through our proprietary Cloud Security Architecture Framework (CSAF). Our engineers assess Entra, XDR, Intune, Purview, and Office 365 to identify control gaps that increase business risk. You get clear, prioritized and actionable recommendations that strengthen critical data protection, reduce exposure to account compromise and email-based threats, and align security investments to industry best practices and organizational priorities.

Turn Microsoft 365 into a Security Advantage

Microsoft 365's rich collaboration capabilities require careful configuration to balance productivity with security across identity, data protection, and access management. A Microsoft 365 health check from GuidePoint can help organizations protect against misconfigurations in Entra ID, XDR, Purview, Exchange, Intune, Teams, and SharePoint that could expose them to potential data breaches and introduce compliance challenges.

Why Get a Microsoft 365 Health Check?

Microsoft 365 is often an organization's largest SaaS investment. It holds sensitive data, delivers productivity applications, and serves as the foundation for communication and innovation. It's also an environment that is constantly changing. Misconfigurations introduced through growth or change can expose organizations to data breaches, compliance violations, and operational disruptions. A Microsoft 365 health check validates security posture, quantifies risk exposure, and ensures deployments deliver both productivity and protection aligned with business objectives.

When to consider a Microsoft 365 health check:

- ✓ After rapid tenant growth
- ✓ As part of mergers or acquisitions
- ✓ In response to security incidents
- ✓ After Microsoft introduces licensing and feature changes
- ✓ When adopting advanced capabilities such as Conditional Access, MFA, Defender, or DLP
- ✓ In preparation for audits or regulatory assessments

Stronger Together. Protecting What's Next.

Working with GuidePoint, your organization will be backed by our elite team of highly trained cybersecurity engineers, architects and consultants who come from organizations of all sizes, including Fortune 100 companies, the Department of War and U.S. intelligence agencies.

Security That Reflects Your Microsoft 365 Environment

A Proven Approach to Secure Microsoft 365

GuidePoint's Microsoft 365 health check employs a proven five-phase methodology that ensures nothing falls through the cracks. Our credentialed Microsoft experts start with a contextual understanding of each customer's environment, then systematically uncover opportunities for immediate risk reduction and long-term strategic improvements. This structured approach transforms security findings into a clear, prioritized roadmap that security teams can actually execute, with confidence that the highest-impact risks are addressed first.

The result: the intelligence needed for stronger configurations, better data protection, improved identity security, and policy adherence that satisfies both technical teams and executive stakeholders.

Uncover Misconfigurations in Microsoft 365

GuidePoint evaluates Microsoft 365 using our Cloud Security Architecture Framework (CSAF), which encompasses an evolving matrix of cloud risks and security controls covering over 12 security domains. Our credentialed engineers identify misconfigurations, excessive privileges, insecure sharing, and data protection gaps. They deliver prioritized, actionable recommendations aligned to CSA CCM, CIS benchmarks, and Microsoft best practices. This comprehensive approach helps organizations strengthen their overall cloud security posture while ensuring security controls support business objectives and operational efficiency even as their Microsoft 365 environments grow and change.

Why GuidePoint Security

When cyber threats hit, you want the best on your side. GuidePoint Security designs, deploys, and delivers tailored cybersecurity solutions that drive real results for Microsoft platform adopters. We architect, deploy, and optimize Microsoft security strategies for seamless, performant protection — faster, smarter, and with less risk to strengthen your defenses. Accelerate your business with confidence — and protect what matters most.

About Us

GuidePoint Security brings together proven expertise, great relationships, and leading technologies to solve our client's most complex cybersecurity challenges. As a trusted cybersecurity advisor and partner, GuidePoint keeps people, data, and operations safe. We deliver tailored cybersecurity services that adapt to safeguard the nation's leading organizations today and provide complete confidence in their cybersecurity tomorrow. Stronger Together. Protecting What's Next.
