GUIDEPOINT® SECURITY

SECURITY OPERATIONS CENTER ARCHITECTURE REVIEW WITH TIDAL CYBER

Level-Up Your Detection and Response Capabilities

With the ever-evolving threat landscape, compliance requirements, and myriads of point solutions, it's essential to implement a threat-informed defense to more effectively monitor, detect, analyze and respond to security incidents.

Ensure your organization is prepared to effectively detect and respond to threats with GuidePoint Security. Our Security Operations Center (SOC) Architecture Review provides an objective analysis of your architecture to identify strengths and pinpoint critical areas for improvement. We don't just skim the surface. We give you confidence that your SIEM, EDR and XDR tools are effectively working together to detect real-world threats faster. Our SOCAR with Tidal Cyber also helps operationalize complex threat intelligence and build a proactive threat-informed defense.

Detect, Analyze and Respond to Security Threats Fast

Many organizations struggle to fully integrate and operationalize their SIEM, EDR and XDR solutions to effectively defend against advanced threats.

GuidePoint Security's Security Operations Center (SOC) architecture review is a specialized assessment designed to evaluate and improve an organization's ability to detect, analyze, and respond to cyber threats using existing tools and processes. Our SOC architecture review with Tidal Cyber augments that architecture review with procedures that detail real behaviors attackers use to execute their techniques.

GuidePoint tailors its SOC architecture review to your organizational needs and unique industry and threat landscape. Our assessment is grounded in the MITRE ATT&CK framework, GuidePoint experts uncover how well your current SOC setup can identify the top tactics, techniques, and procedures (TTPs) most likely to be used against your industry.

GuidePoint is working with Tidal Cyber to deliver tailored cyber threat intelligence aligned with your specific threat profile. Insights from the Tidal platform will enable GuidePoint to gain deeper visibility into the nuances of your technology stack, enabling the development of more comprehensive and effective solutions to address potential security gaps. The Tidal Cyber platform helps security teams connect high-level threat intelligence, such as MITRE ATT&CK techniques, to the concrete, procedural-level actions that adversaries use.

Using real-world expertise, GuidePoint will deep-dive into critical detection capabilities, looking at how well current systems and tools perform against the commonly used TTPs in your sector. By evaluating your architecture against the MITRE ATT&CK framework, GuidePoint helps ensure an objective and transparent analysis of your security posture.

Put a Highly Trained, ELITE Team on Your Side

Your organization will be backed by our team of cybersecurity engineers, architects and consultants who are veteran practitioners from Fortune 100 companies, the Department of Defense and U.S. intelligence agencies.

Strengthen Your Cyber Defense

The SOC is designed for 24/7 threat monitoring, rapid response and for improved security posture management. When operating at its full potential, a SOC will reduce enterprise risk, assure compliance, lower costs, enhance stakeholder trust and ensure business continuity, while protecting your vital assets.

GuidePoint Security's evaluation will identify gaps, inefficiencies, and areas requiring immediate attention. The result? A clear blueprint that identifies strengths, weaknesses, and actionable recommendations to elevate your SOC's maturity and ensure your SOC is operating at its full potential. GuidePoint's architecture review features:

Industry-specific Assessment
Tailored evaluations based on the attack methodologies and unique threats faced by your industry (e.g., utilities, finance, healthcare).

Your Policy – Your Way
A no hassle process that will pick up your policies quickly do identify what your tools are currently doing for you.

Personalized Heatmaps
Easy to understand so you can focus on what matters.

Expert-led Analysis
Delivered by cybersecurity practitioners with hands-on experience managing and operating SOC environments.

Objective Insights
Uses the MITRE ATT&CK framework to quantify your detection capabilities and provide unbiased feedback.

Optimization Overhaul
Provides guidance on how to make your current tools and configurations work more efficiently and effectively together.

Actionable Recommendations
Custom "state-of-the-union" reports to identify where your SOC excels and where it needs support, enabling meaningful improvements.

Strengthen Your Cyber Defense Today

Modern cyberattacks evolve constantly; your defense systems need to keep up. GuidePoint doesn't just stop at identifying gaps – it empowers you with the precision guidance necessary to close those gaps effectively. Are your detection capabilities ready for the challenge? Contact our team today to schedule an expert-driven SOC architecture review assessment and gain clarity about your security posture. Take the first step toward a stronger SOC today.

Why GuidePoint Security

GuidePoint Security's expertise comes from our breadth and depth of experience. Unlike generic reviews, our SOC architecture review draws insights from cybersecurity professionals who have actively managed and transformed high-stakes SOC environments. The outcome isn't another datasheet – it's an actionable roadmap to get the most out of your existing investments. Whether you're a utility provider trying to manage critical infrastructures or an enterprise securing sensitive data, GuidePoint experts evaluate your readiness for real-world threats, provide tailored recommendations to improve your security architecture, and improves your confidence in your organization's detection and response game plan.

About Us

GuidePoint Security provides trusted cybersecurity expertise, solutions, and services to help organizations make better decisions that minimize risk. GuidePoint's unmatched expertise has enabled a third of Fortune 500 companies and more than half of the U.S. government cabinet-level agencies to improve their security posture and reduce risk.
