

THIRD-PARTY RISK MANAGEMENT (TPRM) SERVICES

Manage and Reduce Inherent Risk Across Your Supply Chain

Third-party ecosystems introduce unmanaged risk due to limited visibility, manual assessments, and fragmented processes, leaving organizations exposed to supply chain vulnerabilities, compliance gaps, and increased likelihood of security breaches.

Gain comprehensive visibility into third-party and supply chain risk with a risk-based approach that identifies, prioritizes, and continuously monitors vendor exposure. Replace manual, point-in-time assessments with scalable processes that improve consistency and decision-making. The result is reduced risk, stronger compliance, and a more resilient, well-governed third-party ecosystem that supports business operations without introducing unnecessary exposure.

Mitigate Risks Across Your Vendor Lifecycle

Third-party access to data, systems, and devices significantly expands the attack surface and introduces risk beyond your direct control. The systems and software they use and how they're managed is often outside of your control. At the same time, these third-parties often have varying levels of access into your business and environment, creating pathways for compromise. Without consistent oversight, this exposure can lead to data breaches, unauthorized access, operational disruption, regulatory penalties, financial loss, of the vendor and geopolitical risks.

Third-party Risk Management (TPRM) services from GuidePoint Security help organizations identify, assess, and mitigate vendor-related risk across the full vendor lifecycle. Expert-led assessments, program development, and managed services help organizations strengthen controls, improve oversight, and mature TPRM strategies based on specific business and risk requirements.

With TPRM services from GuidePoint Security, organizations can:

- ✔ Identify program gaps and vendor-related risks
- ✔ Strengthen security and governance controls
- ✔ Improve visibility across the vendor ecosystem
- ✔ Support compliance and audit readiness

Stronger Together. Protecting What's Next.

Working with GuidePoint, your organization will be backed by our elite team of highly-trained cybersecurity engineers, architects, and consultants who come from organizations of all sizes, including Fortune 100 companies, the Department of War, and U.S. intelligence agencies.

Improve Visibility and Reduce Exposure

GuidePoint Security offers specialized, tailored support — including continuous monitoring, questionnaire management, and remediation guidance — designed to reduce the administrative burden on internal teams and improve overall security posture. TPRM services give organizations a clearer view of vendor risk, faster onboarding, and a program that scales with your business supported by a roadmap for automation and maturity over time. TPRM service offerings include:

Program Assessment

Evaluates an organization's current TPRM program and identifies gaps, risks, and opportunities to improve. It reviews policies, procedures, contracts, and Business Associate Agreements (BAA), and includes interviews with procurement, legal, risk, security, and compliance teams.

For example: A healthcare organization needs to confirm vendors handling PHI meet HIPAA requirements before an audit.

Program Development

Designs and refines TPRM programs for clarity, consistency and scalability. Services include defining governance roles, risk tiers, intake workflows, and assessment criteria. It will establish ongoing monitoring, reporting, and tracking to ensure risks don't go unnoticed.

For example: A fast-growing company needs a standardized intake and risk-tiering process to handle a surge in new SaaS vendors.

Program Support Services

GuidePoint experts become an extension of client teams, running vendor assessments and managing workflows using existing tools and platforms. This helps reduce backlog and keeps reviews moving without adding headcount.

For example: An overextended security team needs help clearing a backlog of vendor risk assessments without delaying business operations.

Managed Services

Expertise on demand to manage client TPRM programs, from vendor onboarding to continuous monitoring and reporting. This offering can be integrated with client environments and work with key technology partners to maximize visibility and control.

For Example: A mid-sized enterprise wants to outsource TPRM operations to focus internal resources on core business priorities.

Why GuidePoint Security

When cyber threats hit, you want the best on your side. GuidePoint Security designs, deploys, and delivers tailored TPRM cybersecurity solutions that drive real results. We integrate solutions across any environment — faster, smarter, and with less risk to strengthen your defenses. Accelerate your business with confidence — and protect what matters most.

About Us

GuidePoint Security brings together proven expertise, great relationships, and leading technologies to solve our client's most complex cybersecurity challenges. As a trusted cybersecurity advisor and partner, GuidePoint keeps people, data, and operations safe. We deliver tailored cybersecurity services that adapt to safeguard the nation's leading organizations today and provide complete confidence in their cybersecurity tomorrow. Stronger Together. Protecting What's Next.
