

Unlock the Power of Zscaler & CrowdStrike

Securing Work Beyond
the Perimeter

Leveraging Zero Trust to modernize security across enterprise environments with
CrowdStrike, Zscaler and GuidePoint Security

Hybrid Work Environments have Changed the Game

The corporate network is becoming less relevant as more employees work from anywhere, devices move on and off the office network, and many applications are now in the public cloud or being replaced with SaaS apps. Gateway appliances, once designed to build a hard perimeter around the corporate network are now obsolete.

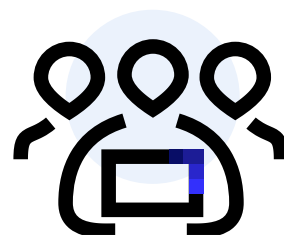

Traditional approaches focused on network security, often neglect device posture checks before granting access to network resources. With the increasing adoption of cloud solutions, relying on outdated castle-and-moat security models becomes ineffective. It's crucial to safeguard end-to-end user-to-application connectivity, regardless of their location. Today's security teams have greater access to data but require tools offering timely and context-rich visibility into that data.

Simplifying Zero Trust with GuidePoint Security, CrowdStrike and Zscaler

Together, GuidePoint Security, CrowdStrike, and Zscaler are simplifying the adoption of Zero Trust for IT teams by providing a comprehensive approach to enhance your security posture and maximize your technology investment. By leveraging this partnership you gain:

- ✓ A real-time view of your device's security posture
- ✓ Leverage granular access policies for critical applications
- ✓ Identify and analyze zero-day threats and remediate quickly
- ✓ Safe, seamless and secure access to essential business applications

As businesses look to enable work-from-anywhere strategies, our joint solutions make it easier to provide users with safe, seamless and secure access to essential business applications for day-to-day employee activity while being built on the foundation of Zero Trust.

Put a Highly-Trained, **ELITE** Team on Your Side

Our team of certified CrowdStrike and Zscaler experts have assisted organizations across various industries with the design and implementation of large scale integration projects.

Hundreds of Industry and Product Certifications

Trusted, Tailored Security Built to Meet Your Unique Zero Trust Requirements

With more than a decade of experience with Zscaler and CrowdStrike, GuidePoint Security is uniquely positioned to support your Zero Trust initiatives from endpoint to application. By sharing threat intelligence and that enables automatic workflows, together we can help organizations reduce the number of security incidents — and, if an incident does occur, deliver quick time-to-detection and remediation. Together, we can enable access to applications and the internet with maximally adaptive access control, without hindering user productivity.

When it Comes to Cybersecurity - One Size Does Not Fit All

Each customer's environment is different. Your needs, gaps, skillsets and risks are also unique.

We take the approach of a trusted advisor, understanding your business and challenges, and evaluating your cybersecurity posture and ecosystem to expose risks, optimize resources and implement best-fit solutions. We can support this integration along with all your cybersecurity needs.

- ✓ Architecture, Deployment, Implementation, and Optimization
- ✓ Zero Trust Network Access Readiness Assessments
- ✓ Migrations and Complex Deployments
- ✓ Product Health Checks

We understand that delivering successful solutions requires personnel with various skills such as business analysts, architects and developers, as well as functional expertise.

About Us

GuidePoint Security provides trusted cybersecurity expertise, solutions and services to help organizations make better decisions that minimize risk. GuidePoint's unmatched expertise has enabled a third of Fortune 500 companies and more than half of the U.S. government cabinet level agencies to improve their security posture and reduce risk.
