

APPLICATION SECURITY TACTICAL SERVICES

Find and Fix Risks Across the Full Application Portfolio

AI integration, mobile proliferation, and accelerating release cadences expand the application attack surface faster than internal teams can assess. If unvalidated code reaches production, it carries risk that compounds with every release.

Reduce the risk of business exposure across growing application portfolios without slowing development timelines or stalling innovative potential. GuidePoint Security Application Security Tactical Services accelerate secure development through flexible engagement models that cover expanding portfolios of all application types, including AI. Organizations receive prioritized risk findings with verified remediation, compliance-ready documentation, to achieve a measurable reduction in production-level exposure.

Security Depth at the Speed and Scale of Innovation

When security validation delays releases, it can create friction between development and security teams. Organizations end up choosing between innovation, velocity, and risk reduction.

GuidePoint Security's Application Security Tactical Services deliver expert-driven, hands-on assessments and reviews through flexible engagement models so clients don't need to sacrifice speed, innovation or risk. GuidePoint aligns assessments to release cadences and organizational goals across traditional and AI-integrated applications. This approach enables organizations to scale traditional applications securely while also capturing the innovative potential of AI without introducing unvalidated risk.

Whether starting with a new application or evaluating an existing application stack, GuidePoint's Application Security Tactical Services:

- ✓ Drive measurable risk reduction with prioritized findings rated by real-world exploitability and potential business impact
- ✓ Scale security validation across growing portfolios without requiring specialized internal teams
- ✓ Secure AI-integrated applications, agentic AI implementations, and custom AI models, enabling rapid innovation without unvalidated risk
- ✓ Deliver actionable, business-prioritized findings with verified remediation confirmation
- ✓ Verify that remediation efforts translate into real risk reduction through structured retesting
- ✓ Produce audit-ready compliance documentation that demonstrates validated application security posture

Stronger Together. Protecting What's Next.

Working with GuidePoint, your organization will be backed by our elite team of highly trained cybersecurity engineers, architects and consultants who come from organizations of all sizes, including Fortune 100 companies, the Department of War, and U.S. Intelligence Community.

Comprehensive Validation for Traditional and AI-integrated Applications

GuidePoint's Application Security Tactical Services deliver expert-driven security validation at every layer of the application stack. Assessments align to OWASP Top 10 and OWASP Top 10 for Large Language Models (LLMs). Flexible engagement models including fixed-scope, time-and-materials, and hybrid structures adapt to portfolio size, development velocity, and compliance timelines.

Application Security Assessments

Identify exploitable vulnerabilities in production-ready applications without disrupting day-to-day operations. Each **Application Security Assessment (ASA)** combines manual and automated testing to identify vulnerabilities across traditional and AI-integrated applications. Credentialed consultants evaluate authentication, authorization, session management, input validation, and business logic through real-world attack simulation. Optional AI-augmented ASAs can rapidly increase coverage scope and accelerate findings without sacrificing depth or contextual relevance. All ASA engagements deliver prioritized findings with actionable remediation guidance and 90-day verification testing. Application Security Assessments address general and platform-specific vulnerabilities for:

- ✓ Thick client applications
- ✓ Mobile applications
- ✓ Web applications
- ✓ AI applications
- ✓ APIs
- ✓ Third-party integrations

Source Code Reviews

Examine application logic at the implementation level. A **Source Code Review** identifies insecure coding practices, cryptographic weaknesses, and authorization flaws within authentication, input validation, and session management functions. By catching vulnerabilities before they reach runtime, organizations reduce the operational risk and improve future development practices.

AI Red Teaming

Test custom AI models and AI implementations against real-world attack scenarios. **AI Red Teaming** evaluates applications, applying OWASP Top 10 for LLMs in customized, time-boxed engagements. Consultants identify prompt injection, data leakage, model manipulation, and system prompt extraction risks, delivering quantified metrics that inform AI governance decisions and remediation priorities.

Why GuidePoint Security

When application vulnerabilities threaten the business, organizations need the best by their side. GuidePoint Security delivers application security advisory, testing, and training services that uncover the critical flaws automated tools alone cannot find. Credentialed consultants bring real-world development experience and deep security expertise across web, mobile, API, and AI applications. GuidePoint assesses, advises, and validates so organizations can deploy with confidence and protect what matters most.

About Us

GuidePoint Security brings together proven expertise, great relationships, and leading technologies to solve our client's most complex cybersecurity challenges. As a trusted cybersecurity advisor and partner, GuidePoint keeps people, data, and operations safe. We deliver tailored cybersecurity services that adapt to safeguard the nation's leading organizations today and provide complete confidence in their cybersecurity tomorrow. Stronger Together. Protecting What's Next.
