

UPWIND ENABLEMENT SERVICES

Drive Platform-wide Risk Reduction, Faster

Organizations invest in Upwind to gain visibility and control across cloud environments. Realizing full platform value within aggressive timelines takes dedicated expertise and focused capacity that compete with operational demands.

Protect cloud security investments and accelerate risk reduction across complex multi-cloud architectures with GuidePoint Security services for Upwind. GuidePoint transforms Upwind Cloud Native Application Protection Platform (CNAPP) capabilities into business-integrated security outcomes aligned to compliance requirements and organizational priorities. Organizations gain accelerated time to value, measurable reduction in alert fatigue, compliance-ready security posture, and a scalable architecture that matures alongside cloud growth.

Expert Guidance from Investment to Operational Maturity

CNAPP touches every layer of cloud security, from posture and entitlements to runtime detection and code. Operationalizing that breadth across distributed teams, existing toolchains, and compliance requirements takes focused capacity that most organizations cannot pull from day-to-day operations.

GuidePoint Security is a certified Upwind security partner with dedicated engineers and multi-cloud delivery experts spanning Amazon Web Services (AWS), Microsoft Azure, Google Cloud, and Oracle Cloud. Every tailored engagement allows organizations to select the capabilities that align with their immediate priorities and expand over time.

With GuidePoint enablement services, organizations can:

- ✓ **Protect Upwind investment** with accelerated time to platform-wide operational value
- ✓ **Reduce alert fatigue** through risk prioritization informed by environmental context and runtime reachability
- ✓ **Strengthen compliance posture** with framework-aligned reporting ready for leadership and auditors
- ✓ **Build long-term operational independence** through structured knowledge transfer and maturation roadmaps
- ✓ **Scale cloud security architecture** alongside business growth without rearchitecting after significant cloud updates or changes

Stronger Together. Protecting What's Next.

Working with GuidePoint, your organization will be backed by our elite team of highly trained cybersecurity engineers, architects and consultants who come from organizations of all sizes, including Fortune 100 companies, the Department of War, and U.S. Intelligence Community.

Unlock Full Upwind Value Without Losing Momentum

GuidePoint structures every engagement around the cloud security lifecycle, meeting organizations at any stage of adoption. Every available GuidePoint service applies to each Upwind module, allowing organizations to define scope and sequence based on current priorities, greatest needs, and compliance timelines.

Comprehensive Services for Full-stack Upwind Operationalization

Health Check

Gain a clear picture of where the current Upwind deployment stands and identify the highest-value opportunities for risk reduction. A prioritized findings report and recommended enablement roadmap inform every subsequent engagement decision.

Deployment, Integration, and Migration

Start from scratch or migrate from another CNAPP solution. GuidePoint helps accelerate time to operational value by connecting Upwind to the cloud accounts, workloads, and toolchains that drive daily security operations. Organizations see faster coverage across SIEM platforms, ITSM systems, identity providers, CI/CD pipelines, and notification channels.

Policy Tuning

Reduce noise and surface findings that warrant action. Custom policy development and policy refinement reflect the organization's specific risk tolerance, regulatory landscape, and environmental context.

Risk Prioritization

Focus remediation where it reduces the most organizational risk. Business context, asset criticality, and runtime reachability separate urgent exposure from theoretical findings so security teams spend time fixing what matters most.

Custom Alerting

Get the right findings to the right team and give them the context they need to act with confidence. Alert routing, escalation logic, and notification workflows match how teams operate and integrate with the tools they already use.

About Us

GuidePoint Security brings together proven expertise, great relationships, and leading technologies to solve our client's most complex cybersecurity challenges. As a trusted cybersecurity advisor and partner, GuidePoint keeps people, data, and operations safe. We deliver tailored cybersecurity services that adapt to safeguard the nation's leading organizations today and provide complete confidence in their cybersecurity tomorrow. Stronger Together. Protecting What's Next.

Reporting

Give every audience the visibility they need to understand current security posture and inform decision-making. Executive dashboards, compliance posture reports, and operational metrics align to frameworks such as CSA CCM, CIS Benchmarks, NIST 800-53, PCI-DSS, HIPAA, and SOC 2.

Ongoing Monitoring

Ensure the platform matures alongside cloud environment growth, new workload adoption, and evolving compliance requirements. Continuous tuning, coverage validation, and periodic health checks sustain long-term operational value.

Why GuidePoint Security

When cyber threats hit your cloud environment, you want the best on your side. From single assessments to portfolio-wide evaluations, with options for ongoing advisory support, staff augmentation, and comprehensive program development, GuidePoint Security designs, deploys, and delivers tailored cloud security solutions that drive real results. Our vendor-objective approach ensures integration with existing investments and provides deep subject matter expertise to transform visibility into action. Accelerate your business with confidence, and protect what matters most.
