

OPERATIONAL TECHNOLOGY (OT) IMPLEMENTATION SERVICES

Transform Security Investments Into Comprehensive OT Defenses

OT security platforms reduce risk only when fully deployed, tuned, and integrated into existing operations. Without specialized implementation, organizations can face delayed visibility, detection gaps, and unplanned disruption to critical processes.

Close the gap between OT security investment to operational detection and asset visibility without disrupting industrial processes or overburdening internal teams. GuidePoint Security delivers structured, low-risk implementation, providing credentialed engineers and architects who have extensive OT expertise and rely on proven deployment methodologies. Organizations gain fully configured monitoring platforms, validated threat detection, IT, SOC, and SIEM integration, and documented knowledge transfer that enables long-term operational independence.

Deploy With Precision. Operate With Confidence.

OT environments operate under constraints that standard IT deployment approaches rarely account for. Sensor placement, network changes, and platform configuration all carry direct risk to stability, safety, and uptime.

GuidePoint Security brings operational environment fluency to every engagement. Each deployment follows a disciplined methodology that respects uptime requirements while building security coverage incrementally. Integration extends beyond the OT platform itself, connecting telemetry into existing security tooling for unified monitoring.

With GuidePoint OT Implementation Services, organization can:

- ✓ **Bring in highly experienced cybersecurity engineers, architects, and consultants** who work exclusively in OT and industrial environments
- ✓ **Compress the gap between OT security investment and operational detection** by deploying within production constraints, not around them
- ✓ **Drive risk-informed prioritization and decision making** with a comprehensive, validated OT asset inventory
- ✓ **Surface exploitable threats** through tuned, actionable alerting that reduces noise and analyst fatigue
- ✓ **Unify IT and OT security operations** by integrating OT telemetry into existing SOC, SIEM, and IT security tooling for consolidated monitoring
- ✓ **Preserve operational continuity** with execution that respects change windows, uptime requirements, and worker safety
- ✓ **Enable long-term operational independence** by transferring knowledge, documentation, and confidence to internal teams

Stronger Together. Protecting What's Next.

Working with GuidePoint, your organization will be backed by our elite team of highly trained cybersecurity engineers, architects and consultants who come from organizations of all sizes, including Fortune 100 companies, the Department of War, and U.S. Intelligence Community.

A Structured, Low-risk Path to a Secure OT Platform

GuidePoint Security meets organizations where they are, building deployment plans around environmental constraints and operational windows, then executing in disciplined phases that protect uptime and prove out detection coverage. Every engagement is tailored to the environment, organizational needs, and budget constraints, ensuring objectives get met without overscoping the engagement or overburdening internal teams.

GuidePoint Security OT Implementation Services

Implementation Services Purpose-built for OT Constraints

OT environments run legacy protocols, air-gapped segments, and safety-critical systems with limited maintenance windows and shared responsibility between IT and facilities teams. GuidePoint OT Implementation Services are purpose-built for the environments they serve.

- ✓ Sensor placement respects process stability and uptime requirements
- ✓ Deployment decisions account for the operational constraints that keep critical infrastructure running
- ✓ Platform configuration reflects fluency with fragile industrial protocols where missteps carry downtime and safety consequences
- ✓ Network changes align with approved change windows

Why GuidePoint Security

When cyber threats target your OT environments, you want the best by your side. GuidePoint Security brings operational fluency, a disciplined deployment methodology, and the ability to work within operational constraints to every engagement. With flexible engagement models that scale from single-facility deployments to enterprise-wide programs and a vendor-objective approach that ensures best-fit solutions, GuidePoint transforms OT security investments into defenses that protect industrial operations and the business outcomes they enable.

About Us

GuidePoint Security brings together proven expertise, great relationships, and leading technologies to solve our client's most complex cybersecurity challenges. As a trusted cybersecurity advisor and partner, GuidePoint keeps people, data, and operations safe. We deliver tailored cybersecurity services that adapt to safeguard the nation's leading organizations today and provide complete confidence in their cybersecurity tomorrow. Stronger Together. Protecting What's Next.
