

Reduce Enterprise Risk With Optimized SentinelOne Deployments

Managing multiple fragmented consoles and security tools can create unnecessary friction. Add in false-positive alerts, fragmented data, and missing context, and SOC teams are left spending more time chasing noise than addressing actual threats.

GuidePoint Security combines SentinelOne's AI-native Singularity platform – spanning endpoint, cloud, and identity – with vendor-objective expertise and full-lifecycle technical services. GuidePoint ensures your SentinelOne investment delivers measurable security outcomes: faster deployment, fewer blind spots, and a unified security program tailored for your environment, from POC through ongoing operations, so you shift from alert triage to focus on strategic priorities.

AI-powered Protection, Expert-led Deployment and Optimization

Endpoints remain a top attack vector, and the surface keeps expanding with remote devices, cloud workloads, and unmanaged assets. Legacy tools can't keep pace with fileless attacks, living-off-the-land techniques, and AI-driven ransomware. Meanwhile, security teams are drowning in alerts, juggling too many tools, and lacking full visibility across their environments.

GuidePoint Security pairs SentinelOne's AI-native Singularity platform with hands-on expertise to close the gap between deployment and outcomes.

SentinelOne's Singularity platform unifies endpoint, cloud, identity, and AI security through autonomous AI and a unified data lake. A lightweight agent detects and remediates threats in real time across endpoints, servers, and cloud workloads, while cloud security, identity protection, and AI SIEM extend visibility across the full attack surface. Purple AI accelerates threat hunting with natural-language queries, cutting SOC noise. AI Prompt Security protects AI applications from prompt injection, data leakage, and model manipulation.

GuidePoint Security makes sure SentinelOne solutions are fully deployed, operational, and optimized in your environment. Our highly certified engineers handle architecture design, deployment, policy tuning, and integration with your existing security stack: SIEM, SOAR, identity providers, and cloud platforms. The GuidePoint team can also provide on-demand expertise who operate as an extension of your SOC to monitor, triage, hunt, and escalate concerns to help your team rise above the noise.

Working together, GuidePoint and SentinelOne help you realize faster time-to-value, fewer blind spots, and an optimized security program that scales with your business.

Stronger Together. Protecting What's Next.

Working with GuidePoint, your organization will be backed by our elite team of highly trained cybersecurity engineers, architects, and consultants who come from organizations of all sizes, including Fortune 100 companies, the Department of War, and U.S. Intelligence Community.

Superior Protection, Faster Time to Value

Most organizations own security tools they haven't fully operationalized. Policies ship in default mode. Integrations sit half-built. Detection logic doesn't reflect your actual environment. And the SOC team, who is already stretched thin, inherits another console they didn't have time to learn.

GuidePoint Security closes that gap with full-lifecycle technical services purpose-built for SentinelOne's Singularity platform. Our certified engineers evaluate SentinelOne against your environment, threat profile, and existing stack, running scoped POCs against real-world use cases.

GuidePoint experts help organizations with architecture design, agent rollout strategy, policy configuration, security pipeline development, and integration with SIEM, SOAR, and identity providers. We ensure your SentinelOne solutions are tuned to the organization's risk tolerance.

Post deployment, GuidePoint optimizes detection policies, builds custom rules for environment-specific threats, manages exclusions, and configures Storyline-based response automation. For those who need on-demand support, the GuidePoint team can operate as an extension of your SOC to help monitor, triage, hunt, and escalate issues with full root cause analysis on every incident.

GuidePoint Security highly-trained and certified experts ensure faster deployment, fewer false positives, tighter coverage, and clean telemetry data for an optimized security stack that works in your environment.

Enterprise Security Advisory Services

- ✓ Best-fit solution selection
- ✓ Asset discovery
- ✓ Proof of value engagements

Tactical Support and Implementation

- ✓ Security Architecture Review
- ✓ Hands-on, deployment, configuration, custom integrations, and operationalization
- ✓ Health checks
- ✓ Product migrations

Optimization

- ✓ Fine-tune SentinelOne solutions to ensure they are working as intended and provide the promised and needed protection

Why GuidePoint Security

When cyber threats hit, you want the best on your side. GuidePoint Security designs, deploys, and delivers tailored cybersecurity solutions like SentinelOne to drive real results. We integrate solutions across any environment — faster, smarter, and with less risk to strengthen your defenses. Accelerate your business with confidence, and protect what matters most. GuidePoint is an award-winning SentinelOne partner.

About Us

GuidePoint Security brings together proven expertise, great relationships, and leading technologies to solve our client's most complex cybersecurity challenges. As a trusted cybersecurity advisor and partner, GuidePoint keeps people, data, and operations safe. We deliver tailored cybersecurity services that adapt to safeguard the nation's leading organizations today and provide complete confidence in their cybersecurity tomorrow. Stronger Together. Protecting What's Next.
