GUIDEPOINT® SECURITY

APPLICATION SECURITY PROGRAM (S-SDLC) ASSESSMENT SERVICES

Measure, Benchmark, and Advance S-SDLC Program Maturity

Without a defined application security program, organizations cannot scale secure development practices. Gaps across governance, processes, and architecture compound undetected with every release.

Eliminate reactive, ad-hoc application security by establishing a structured program that scales with innovation and development velocity. GuidePoint Security identifies gaps within existing Secure Software Development Lifecycle (S-SDLC) programs or helps build them from scratch, benchmarking maturity against industry frameworks. Organizations receive maturity scorecards, phased improvement roadmaps, and prioritized recommendations that reduce long-term costs, satisfy compliance requirements, and work across all application types, including AI.

Scalable Application Security Starts With a Measured Baseline

GuidePoint Security's Application Security Program Assessment Services quantify gaps in new and existing S-SDLC programs. Credentialed consultants with extensive development and security engineering backgrounds partner directly with customer teams to understand organizational context before defining scope. Benchmarked against industry frameworks, the assessment establishes a measured baseline and delivers a phased roadmap aligned to business growth, compliance timelines, and resource constraints.

Consider a S-SDLC Program Assessment When:

- **Ad-hoc security practices cannot keep pace** with development velocity or portfolio growth
- **Building an application security program from scratch** or establishing formal governance for the first time
- **AI adoption introduces new challenges** that existing program governance can not adequately address
- **Regulatory or compliance requirements** demand demonstrated program maturity and documented evidence
- **New security leadership needs to establish priorities,** benchmark current state, and define a strategic direction
- **Failed audits, security incidents, or findings** expose process-level gaps
- **Development friction indicates misalignment** between security practices and development workflows

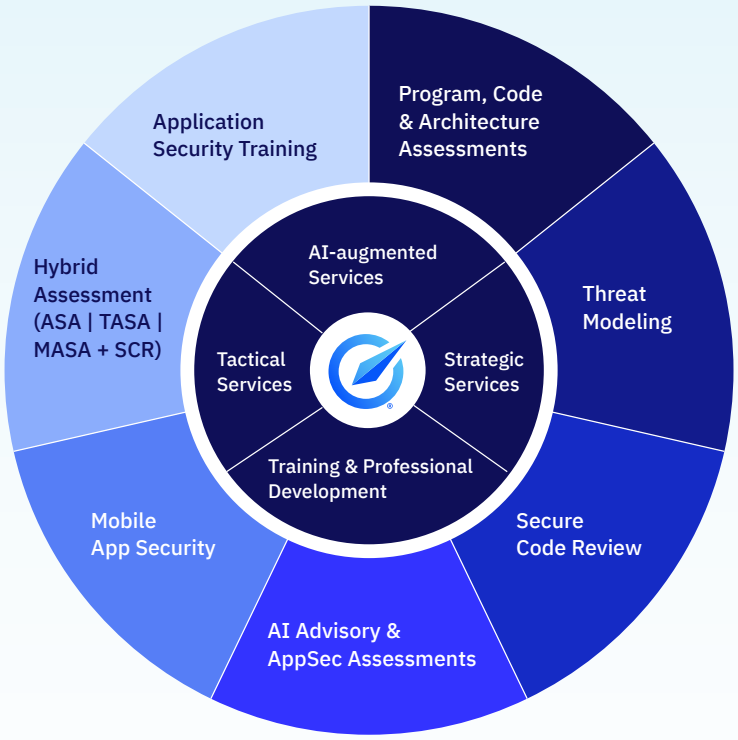

Stronger Together. Protecting What's Next.

Working with GuidePoint, your organization will be backed by our elite team of highly trained cybersecurity engineers, architects and consultants who come from organizations of all sizes, including Fortune 100 companies, the Department of War, and U.S. Intelligence Community.

A Proven Methodology for Building and Advancing Secure Development Programs

Ensure a comprehensive assessment across the complete S-SDLC lifecycle. GuidePoint evaluates maturity based on an established set of governance domains, benchmarking current state against industry frameworks, and defining measurable improvement targets. Each engagement is tailored to the customer's unique environment and objectives, yet still provides the rigor of a proven process that moves from program context and maturity benchmarking through gap identification to a remediation strategy prioritized by business impact.

Define an Achievable Path to Cyber Maturity

Know where to start, and where to go next. Each Application Security Program Assessment goes beyond gap analysis and current-state reports. GuidePoint defines a target future state for the application security program and delivers a time-boxed roadmap of prioritized initiatives that advance the organization from measured baseline to target maturity.

While every engagement is tailored to the application and organizational goals, some examples include:

- Security governance & policy enforcement
- Secure architecture & design standards
- Threat modeling integration
- Security testing practices & tool effectiveness
- Developer security training & awareness
- Vulnerability management & remediation
- Third-party, API, and open-source components
- AI application security & governance
- Metrics, reporting, and continuous improvement

Why GuidePoint Security

When application vulnerabilities threaten the business, organizations need the best by their side. GuidePoint Security delivers application security advisory, testing, and training services that uncover the critical flaws automated tools alone cannot find. Credentialed consultants bring real-world development experience and deep security expertise across web, mobile, API, and AI applications. GuidePoint assesses, advises, and validates so organizations can deploy with confidence and protect what matters most.

About Us

GuidePoint Security brings together proven expertise, great relationships, and leading technologies to solve our client's most complex cybersecurity challenges. As a trusted cybersecurity advisor and partner, GuidePoint keeps people, data, and operations safe. We deliver tailored cybersecurity services that adapt to safeguard the nation's leading organizations today and provide complete confidence in their cybersecurity tomorrow. Stronger Together. Protecting What's Next.
