GUIDEPOINT® SECURITY

GOOGLE CLOUD SECURE LANDING ZONE DESIGN SERVICES

Secure Cloud, Built from Day One

Organizations deploying workloads on Google Cloud without a formal landing zone architecture inherit security gaps, compliance exposure, and data loss that compound with every project added.

Establish a production-grade Google Cloud foundation that accelerates workload deployment while embedding security, compliance, and cost governance into the platform layer. GuidePoint Security designs secure landing zone architectures tailored to the organization's regulatory environment, workload mix, and operational requirements across eight critical domains. Organizations gain the operational confidence to move workloads to production faster, audit-ready compliance posture, and measurable protection of cloud investment value.

Your Cloud Foundation Defines Your Security Ceiling

Every workload, identity decision, and network path inherits the security posture of the landing zone beneath it. Organizations that build on Google Cloud without a formal architecture spend more time remediating design debt than deploying production workloads.

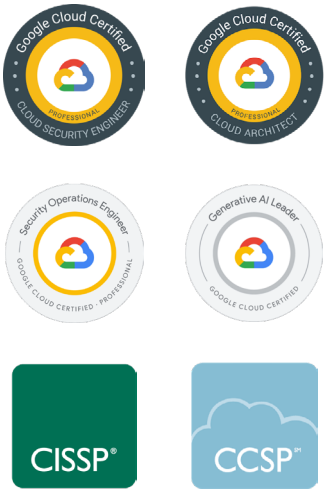

GuidePoint Security's credentialed Google Cloud architects scope every engagement to the organization's regulatory environment, workload mix, and operational priorities. Designs embed governance, segmentation, identity, compliance, cost optimization, and observability into the platform before the first workload deploys.

With GuidePoint Security, organizations can:

- **Reduce compliance exposure** by designing regulatory controls into the architecture, not bolting them on after audit findings
- **Accelerate workload deployment** with a validated foundation that engineering teams can build on immediately
- **Eliminate design debt** before it compounds across projects, regions, and business units
- **Align security, cost, and availability architecture to business requirements** from the start

Stronger Together. Protecting What's Next.

Working with GuidePoint, your organization will be backed by our elite team of highly trained cybersecurity engineers, architects and consultants who come from organizations of all sizes, including Fortune 100 companies, the Department of War, and U.S. Intelligence Community.

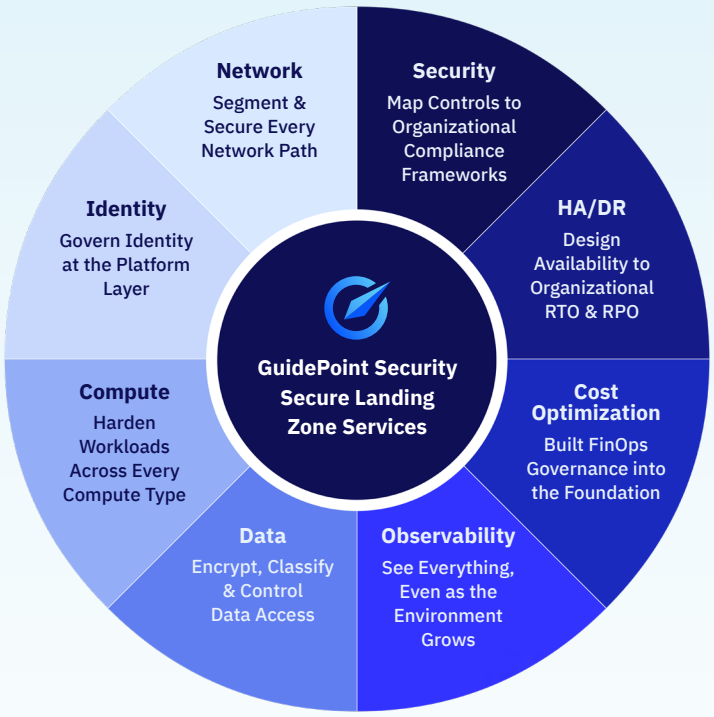

Landing Zones That Solidify the Security Foundation

Every architecture decision made at the platform layer cascades into each project, workload, and environment built on top.

GuidePoint Security's Secure Landing Zone Design services capture the decisions that matter most and build them into the landing zone: how compliance is enforced, how identity is governed, how availability is modeled, how cost is contained, and how operations are observed. Get those decisions right once at the foundation, and every workload above inherits them automatically.

Each landing zone is architected and delivered through a proven methodology, refined across regulated industries, greenfield builds, and enterprise re-architecture programs. Every engagement is scoped to the customer's environment and compliance obligations.

When to Consider GuidePoint Security's Secure Landing Zone Design Services:

- **New Platform Launch:** Production deployment on Google Cloud with a compliance milestone on the calendar
- **Cloud Migration:** Workloads moving from on-premises or another provider without a validated target-state design
- **Audit Preparation:** SOC 2, HIPAA, PCI-DSS, or FedRAMP assessment approaching with no architecture-level control documentation
- **Scale or Re-architecture:** Expanding beyond proof-of-concept into multi-region, production-grade infrastructure
- **M&A Integration:** Inherited Google Cloud environments with undocumented architecture decisions
- **AI/ML Deployment:** Vertex AI, Gemini, or BigQuery ML workloads introducing new data governance and access control requirements

Why GuidePoint Security

When cyber threats hit, you want the best on your side. GuidePoint Security delivers tailored services to empower Google Cloud adopters. Whether at the start of the Google Cloud security journey or looking to refine an advanced environment, we meet organizations where they are. We integrate solutions across any environment, faster, smarter, and with less risk to strengthen defenses. Accelerate your business with confidence, and protect what matters most.

About Us

GuidePoint Security brings together proven expertise, great relationships, and leading technologies to solve our client's most complex cybersecurity challenges. As a trusted cybersecurity advisor and partner, GuidePoint keeps people, data, and operations safe. We deliver tailored cybersecurity services that adapt to safeguard the nation's leading organizations today and provide complete confidence in their cybersecurity tomorrow. Stronger Together. Protecting What's Next.
