GUIDEPOINT® SECURITY

GOOGLE WORKSPACE HEALTH CHECK

Ensure Confidence in Google Workspace Security

Google Workspace environments accumulate configuration debt silently. Settings changed to unblock a project are never revisited, administrators leave without a handoff, and temporary permissions become permanent access.

Surface the misconfigurations, access gaps, and compliance exposures that accumulate across a Google Workspace environment before an auditor or an attacker finds them first. GuidePoint Security delivers an independent, read-only assessment across all Google Workspace security domains, benchmarked against industry standards, and weighted by real-world exploitability. Organizations move from inherited configuration risk to documented, validated security posture, on a timeline they control rather than one an auditor or attacker dictates.

Validate the Environment That Runs the Business

Most Google Workspace environments are managed by teams stretched across infrastructure, identity, endpoint, and compliance responsibilities. Internal security reviews often compete with operational demands, leading to reliance on admin console outputs without the contextual analysis needed to determine real-world exploitability.

GuidePoint Security's certified Google security specialists bring dedicated assessment capacity and domain depth that internal teams rarely have bandwidth to replicate. Every engagement is tailored to the organization's compliance obligations, operational model, and risk tolerance across CIS security domains, CSA Cloud Controls, and Google security best practices, and more.

With a GuidePoint Google Workspace Health Check, organizations can:

- **Identify exploitable misconfigurations** beyond those surfaced by Google's native security health page
- **Benchmark the environment** against the CIS Google Workspace Foundations Benchmark and applicable compliance frameworks
- **Understand environmental risks with severity-rated findings** weighted by exploitability in the specific operating environment
- **Close issues quickly with a prioritized remediation roadmap** sequenced to business priorities and compliance timelines

Stronger Together. Protecting What's Next.

Working with GuidePoint, your organization will be backed by our elite team of highly trained cybersecurity engineers, architects and consultants who come from organizations of all sizes, including Fortune 100 companies, the Department of War, and the U.S. Intelligence Community.

Independent, Audit-ready, and Actionable Google Workspace Security Validation

GuidePoint Security evaluates Google Workspace using automated tooling, manual inspection, and stakeholder interviews. Findings are validated against the CIS Google Workspace Foundations Benchmark, the CSA Cloud Controls Matrix, and Google security best practices. Domains not yet covered by current benchmarks, including Gemini for Workspace data governance and Marketplace app access, are assessed against GuidePoint-developed controls and industry best practices.

Validate privilege assignment, enforce least access, and evaluate Google Groups membership controls and access inheritance.

Verify Gmail sender authentication, domain signing, and message conformance controls to prevent spoofing and phishing.

Review external Meet and Chat participation, communication boundaries, and retention controls across channels.

Assess Drive and Shared Drive policies, DLP coverage, and external sharing exposure to protect sensitive data.

Confirm endpoint device enrollment, compliance posture, and security policy enforcement across managed devices.

Identify Vault retention gaps across every service to maintain legal hold readiness and compliance integrity.

Assess audit readiness and investigation tool configurations to ensure rapid response during security incidents.

Uncover OAuth grants and third-party data access risks associated with installed Marketplace applications.

Govern Gemini interactions, user permissions, prompt history, and data retention settings.

Consider a GuidePoint Security's Workspace Security Health Check when:

- **An upcoming SOC 2, ISO 27001, HIPAA, PCI DSS, or CMMC assessment** date approaches, but the organization lacks independent Workspace security documentation
- **A phishing, business email compromise, data exfiltration, or account takeover incident** exposed gaps that need independent validation
- **Admin changes, headcount shifts, and feature releases** may have caused unverified configuration drift
- **The organization inherited a Workspace environment** through a merger or acquisition
- **A Gemini for Workspace rollout needs data governance assurance** before enabling organization-wide access
- **A Workspace administrator departed** without leaving behind a documented configuration baseline or handoff

Why GuidePoint Security

When cyber threats hit, you want the best on your side. GuidePoint Security combines cybersecurity expertise, identity strategy, and technology guidance to help organizations build resilient identity verification programs. Our vendor-objective approach enables clients to evaluate solutions, strengthen verification processes, and develop scalable strategies that reduce fraud risk and protect what matters most.

About Us

GuidePoint Security brings together proven expertise, great relationships, and leading technologies to solve our client's most complex cybersecurity challenges. As a trusted cybersecurity advisor and partner, GuidePoint keeps people, data, and operations safe. We deliver tailored cybersecurity services that adapt to safeguard the nation's leading organizations today and provide complete confidence in their cybersecurity tomorrow. Stronger Together. Protecting What's Next.
