GUIDEPOINT® SECURITY

SAAS SECURITY PROGRAM DEVELOPMENT

Security That Keeps Pace With SaaS Adoption

Ungoverned SaaS adoption can quickly outpace security, laying the foundation for misconfigurations, identity sprawl, and unreviewed integrations that create risk and expand attack surfaces.

Governing Software-as-a-Service (SaaS) environments requires expertise, a structured approach, and a program built around how the organization operates. Credentialed SaaS security experts at Guidepoint Security deliver exactly that. The SaaS Security Program Development engagement takes a tailored, phased approach, moving the organization from its current state through full maturity. Each phase aligns to your risk tolerance and compliance requirements while building the operational processes needed to govern SaaS continuously.

Built for Complexity. Designed to Operate.

Most SaaS security work is project-based: a one-time assessment; a tool deployment; a reactive fix. The SaaS Security Program Development service from GuidePoint Security builds something bigger.

GuidePoint establishes the governance needed to tie tools, teams, and processes together. We help establish application owners, define workflows, and implement operational cadences that turn ad-hoc SaaS work into a continuously managed program. The result is an organization that knows what it has, governs what it uses, and can respond when something goes wrong.

The GuidePoint SaaS Security Program helps organizations:

- **Establish clear security ownership** through a clearly defined program charter, governance policy, and accountability matrix
- **Eliminate blind spots** by building a complete, continuously maintained inventory of SaaS applications, owners, and associated risk
- **Close the gap between SaaS adoption and accountability** with full-lifecycle application governance
- **Reduce exposure from identity sprawl** with established, repeatable controls for user access, privileged accounts, and non-human identities
- **Establish continuous posture management** with threat detection, drift monitoring, and incident response embedded into daily workflows

Stronger Together. Protecting What's Next.

Working with GuidePoint, your organization will be backed by our elite team of highly trained cybersecurity engineers, architects and consultants who come from organizations of all sizes, including Fortune 100 companies, the Department of War, and U.S. Intelligence Agencies.

A SaaS Security Program Built to Support Your Business

Our phased approach starts by establishing ownership and governance, then builds complete SaaS visibility through discovery, classification, and risk prioritization. From there, it governs the full application lifecycle, hardens posture through continuous SaaS Security Posture Management (SSPM)-driven assessment, and brings identity and access under repeatable controls. Integration risks are mapped and governed, and the program closes by embedding SaaS-specific detection, response playbooks, and audit-ready reporting into daily operations.

Each engagement is tailored to the organization at each step. Deliverables are built in sequence with knowledge transfer embedded throughout, and the program concludes with a structured handoff supported by working groups, recurring reviews, and executive briefings.

Why GuidePoint Security

When cyber threats hit, you want the best on your side. GuidePoint Security designs, deploys, and delivers tailored cybersecurity solutions that drive real results. We integrate solutions across any environment — faster, smarter, and with less risk to strengthen your defenses. Accelerate your business with confidence – and protect what matters most.

About Us

GuidePoint Security brings together proven expertise, great relationships, and leading technologies to solve our client's most complex cybersecurity challenges. As a trusted cybersecurity advisor and partner, GuidePoint keeps people, data, and operations safe. We deliver tailored cybersecurity services that adapt to safeguard the nation's leading organizations today and provide complete confidence in their cybersecurity tomorrow. Stronger Together. Protecting What's Next.
