GUIDEPOINT® SECURITY

SECURE CLOUD PLATFORM SERVICES FOR DATA AND AI

Accelerate Cloud AI Adoption With a Secure Data-to-AI Pipeline

Cloud AI adoption is accelerating faster than security architectures can adapt, creating governance gaps, regulatory exposure, and unprotected data-to-AI pipelines across complex environments.

Protect the business value of cloud and AI investments by ensuring data integrity, platform governance, and regulatory alignment stay ahead of adoption velocity. GuidePoint Security architects and automates security across the full data-to-AI pipeline, tailored to each organization's environment, maturity, and compliance landscape. Organizations gain sustained confidence in their AI-ready architecture, reduced regulatory exposure, and a security posture that evolves alongside rapid cloud expansion.

Turn Cloud AI Expansion Into Governed, Confident Growth

Every data platform, AI tool, and cloud environment introduces configuration, governance, and compliance complexities that compound at scale. Teams adopting Copilot, Amazon Bedrock, or Gemini Enterprise (Vertex AI) inherit security dependencies they didn't plan for, and many organizations lack the specialized capacity to secure data-to-AI workflows across multiple providers and applications simultaneously.

GuidePoint Security closes that gap with credentialed experts who secure the full data-to-AI pipeline across Azure, AWS, Google Cloud, Oracle Cloud Infrastructure (OCI), and SaaS ecosystems. Engagements scale from health checks to advisory to production engineering, tailored to each organization's environment, maturity, and AI roadmap.

With GuidePoint Security's Secure Cloud Platform Services, organizations can:

- **Accelerate secure AI adoption** by embedding governance and guardrails before production, not after an incident
- **Reduce regulatory exposure** across data and AI frameworks, including GDPR, HIPAA, PCI DSS, the EU AI Act, NIST AI RMF, and the CSA AI Controls Matrix (AICM), with built-in compliance architecture
- **Close multi-cloud blind spots** with unified security coverage spanning data platforms, AI environments, and the pipelines connecting them
- **Scale rapidly through flexible engagement models** that deliver specialized depth your team can leverage immediately
- **Maintain business continuity** by aligning security architecture to your existing environment and roadmap

Stronger Together. Protecting What's Next.

Working with GuidePoint, your organization will be backed by our elite team of highly trained cybersecurity engineers, architects and consultants who come from organizations of all sizes, including Fortune 100 companies, the Department of War, and the U.S. Intelligence Community.

Architect and Automate Security Across the Full Data-to-AI Pipeline

Secure Cloud Platform Services for Data and AI are delivered through structured healthchecks, advisory, and engineering engagements, each tailored to the organization's maturity level, immediate objectives, and long-term goals. Platform-specific implementation expertise using native tools, coupled with hands-on knowledge of third-party security solutions, ensures best-fit recommendations without vendor bias.

Secure Cloud Platform Data Services

AI-ready data security in the cloud introduces distinct configuration and govenance requirements that compound as organizations scale. Secure cloud platform engagements follow the Medallion Architecture, with data security posture management (DSPM), sensitive data discovery, classification, and platform policy configuration woven into each layer.

- **Establish baseline governance** by evaluating platform posture, data classification maturity, and policy enforcement gaps
- **Architect secure, scalable environments** through advisory engagements that align DSPM, secure data architecture, and migration paths to the organization's roadmap
- **Engineer scalable data and AI platforms** through IaC-driven environments, automated pipelines, Medallion layers, quality gates, sensitive data discovery, and policy-as-code enforcement

Secure Cloud Platform AI Services

Secure AI configuration, machine learning operations (MLOps) pipeline integrity, and platform policy enforcement each require specialized depth across Microsoft Copilot, Azure AI Foundry, Amazon Bedrock, SageMaker, Amazon Q, Google Gemini Enterprise (Vertex AI), and more.

- **Baseline AI readiness** by assessing platform security, MLOps maturity, and responsible AI alignment through structured health checks
- **Shape deployment strategy** through advisory engagements that develop platform guardrail frameworks and compliance roadmaps aligned to the EU AI Act, NIST AI RMF, CSA AICM, and state AI legislation
- **Deploy enterprise-scale AI infrastructure** through engineering engagements that operationalize AI and MLOps pipelines, guardrails, policy-as-code, and model deployment infrastructure

Seamless Security Solutions for Cloud Environments

Every engagement can be extended to additional security domains, including Governance, Risk, and Compliance (GRC), Application Security, Identity and Access Management (IAM), Penetration Testing Services, Incident Response, and more, for a comprehensive solution that accelerates secure AI adoption.

Why GuidePoint Security

When cyber threats and cloud complexity evolve at the speed of AI-driven development, organizations need a partner with the depth to match. GuidePoint Security designs, deploys, and delivers tailored cloud security solutions that drive real results across every major platform. Vendor-objective and adaptable to each environment, GuidePoint integrates security into data and AI workflows faster, smarter, and with less risk. Accelerate AI in the cloud with confidence, and protect what matters most.

About Us

GuidePoint Security brings together proven expertise, great relationships, and leading technologies to solve our client's most complex cybersecurity challenges. As a trusted cybersecurity advisor and partner, GuidePoint keeps people, data, and operations safe. We deliver tailored cybersecurity services that adapt to safeguard the nation's leading organizations today and provide complete confidence in their cybersecurity tomorrow. Stronger Together. Protecting What's Next.
